

The Kiskunság National Park provides the protection of the protected and the highly protected natural values.

In Hungary the borderlines of the protected areas are signalled on an oval blue board with an "Egretta alba" on it.

It protects the rare, and thus endangered, habitats and species. According to the guidelines of Natura 2000, the Kiskunság National Park helps to provide the connection between the habitats.

The park gives high protection to endemic and relic plants. The members of the guard duty in the nature reserve are watching constantly the changes in the numbers of species. If necessary, the protection can be solved by guarding or displacement.

Monitoring. They provide the protection of the nestling and migrating species by guarding the nests of the endangered bird species, by putting out artificial lairs and by watching and noting down their growth.

Roller -*Coracias garrulus*

Besides preservation, the experts of the park look after the restoration and rehabilitation of the damaged habitats.

Natural disaster in the Kiskunság National Park - fire in the juniper forest in Bugac

The Kiskunság National Park contributes to the protection of the ancient domesticated species, breeds and their genom with the aim of scientific research, they help visitors meet these species.

Hungarian Grey cattle

Cultural heritage.

The open air shows introduce the traditions of the shepherds' lifestyle, the tasks of the horsemen to the visitors. The Sheperds Museum displays utensils and devices.

The natural park can be the perfect setting of environmental education as well. Primary and secondary school students can find out about the characteristics of the protected species and the duties of the national park in forest schools.

# You can learn about the different faces of the national park.

Turjánvidék

Szappan-szék /a sodic lake/

Hajó-lapos

The mounds of Fülöpháza

On World Environment Days, at weekends and in summer the visitors have the possibility to enhance their knowledge individually,

can go along study paths, may try birdwatching, experience the values of the landscape while hiking.

The visitor can get an insight to the cuisine of the region. The "csárda" offers accommodation and meals for incoming guests.

# THANK YOU FOR YOUR ATTENTION!
